SUMMARY

1. Overview

Mr. Tran Hai Quan is a Senior Front-End Developer with over 13 years of experience in software development, specializing in Angular, React, and .NET technologies. He has worked across various industries including IoT, Manufacturing, Banking, and E-commerce.

His key skills include: Front-end Development, Full-stack Development, IoT Development, and Software Engineering.

2. Main Skills:

- Angular (versions 6-15+)
- React JS
- .NET Core
- TypeScript/JavaScript
- HTML5/CSS3/Figma/Tailwindcss
- IoT Development
- DevOps (Azure, CI/CD)
- Unit Testing.

3. Experiences

- Extensive experience in developing web applications using modern frameworks
- Worked with international clients from Australia, US, Singapore
- Strong background in IoT projects and hardware integration
- Experience in implementing CI/CD pipelines and DevOps practices.

4. Soft skills:

- Team collaboration
- Problem-solving

- Quick learning ability
- Working under pressure
- Independent working
- Creative thinking
- Communication skills.

5. Foreign Languages:

- Excellent written and verbal English communication skills.

EDUCATION

Duy Tan University
Bachelor of Software Engineering

Danang, Vietnam
2007 – 2010

CERTIFICATES

1. **Angular Testing Master Class** – Udemy
2. **Advanced CSS and Sass: Flexbox, Grid, Animations and More!** – Udemy
3. **Angular – The Complete Guide** (2025 Edition) – Udemy
4. **React Basic** – Coursera
5. **AZ-900: Microsoft Azure Fundamentals Exam Prep - SEP 2024** – Coursera
6. **ChatGPT Complete Guide: Learn Generative AI, ChatGPT & More** – Udemy
7. **Ultimate Guide to Raspberry Pi: Tips, Trick and Hacks** – Udemy
8. **IOT Wireless & Cloud Computing Emerging Technologies** – Coursera
9. **Introduction and Programming** with IoT Boards – Coursera

PROFESSIONAL EXPERIENCE

Panasonic Group (Manufacturing)	
Duration	2024 -- Present
Size	+10
Position	Front-End Developer
Project Description	• Managing Material Allocation in Electrical Projects involves efficient tracking, distribution, and utilization of materials like cables, conduits, transformers, switches, and other equipment. A well-structured system ensures minimal wastage, reduced costs, and timely completion of projects.
Responsibility	• Project: Panasonic Group (Manufacturing) • Responsibilities:

	- Developed and maintained dashboard applications 3D accessories management using ThreeJs - Built responsive interfaces using Flexbox - Performed troubleshooting and debugging - Build app to use handheld device, mobile app or web app
Tools	Angular 5+, .Net MVC, React, PostgresSql, Github, Jira

EBM Papst Group (Manufacturing)

Duration	<i>2024 -- Present</i>
Size	4
Position	<i>Front-End Developer</i>
Project Description	This app is about an Industrial Fan Management App involves features to manage and monitor industrial fans effectively while integrating a predictive system to recommend appropriate fan types and capacities based on the environment
Responsibility	- Project: EBM Papst Group (Manufacturing) - Technologies: eCharts, Material UI, Flexbox, Angular 12+, .NET Core, Java, Postgres Sql, Git - Responsibilities: - Developed and maintained dashboard applications 3D accessories management using ThreeJs - Built responsive interfaces using Flexbox - Performed troubleshooting and debugging - Build app to use handheld device, mobile app or web app
Tools	Highcharts, Primeng, Ag grid, Material UI, Three 3D, Flexbox, Angular 16+, Github, Jira, Gitlab

Schaeffler Group (Manufacturing)

Duration	<i>2022 -- Present</i>
Size	5
Position	<i>Front-End Developer</i>
Project Description	This app to manage materials, including inputs, outputs, and containers, a Material Management System (MMS) can be designed. This system ensures efficient tracking, storage, movement, and reporting of materials, making it especially useful in industries like manufacturing, logistics, and warehousing.

Responsibility	• Project: Schaeffler Group (Manufacturing) • Technologies: eCharts, Material UI, Flexbox, Angular 12+, .NET Core, SQL Server, Git • Responsibilities: ◦ Developed and maintained dashboard applications ◦ Implemented barcode scanner functionality ◦ Created Unity 3D tools management ◦ Built responsive interfaces using Flexbox ◦ Performed troubleshooting and debugging ◦ Build app to use handheld device, mobile app or web app to scan the barcode
Tools	eCharts, highcharts, Material UI, Flexbox, Angular 12+, .NET Core, SQL Server, Git

Cars Management System	
Duration	2019 - 2021
Size	6
Position	Full-stack Developer
Project Description	This project about the car management and dealership operations in Australia involve a variety of aspects, including the sale of new and used vehicles, maintenance and servicing, financing, and customer relationship management
Responsibility	• Created and maintained dashboard with charts • Developed car management system features ◦ Make the list and their entries to manage the clients, stocks, staffs, profiles, payments, banking, invoices, audit, accounts, ... • Generated reports using JavaScript, PDF, and Active Report • Implemented debugging and system upgrades • Managed version control and CI/CD pipelines
Tools	Angular 8+, Angular JS, .NET MVC C#, OnTime task management, GitHub, Jira, Bitbucket CI/CD, Active Report

IOT Industry	
Duration	2018 – 2019
Size	4
Position	Full-stack Developer
Project	Building management systems (BMS) integrated with energy control, HVAC

Description	(Heating, Ventilation, Air Conditioning), pumps, door management, NVR (Network Video Recorder) cameras, and AI are essential for efficient, smart, and secure building operations
Responsibility	• Built complete system from scratch • Implemented face recognition features • Developed worker and company management systems • Created building automation systems • Managed IoT sensors and building systems • Handled door API and booking features • Implemented photo (file) management on Azure blob
Tools	Angular 15+, Material, Azure MSAL, Azure Blob, .NET Core, MongoDB, Azure DevOps

Drug Store Management

Duration	2017 - 2018
Size	3
Position	Technical Manager
Project Description	A smart drug store management system with a mobile app, CDN server, and multi-branch application, focusing on quantity management, warehouse and intelligent features to streamline operations: Real-Time Tracking, Predictive Stock Reordering, Expiry Management, Stock Redistribution
Responsibility	• Developed drug store management system • Implemented front-end features using Angular JS • Created responsive designs using Flexbox
Tools	Angular JS, .NET MVC C#, PostgreSQL, jQuery, Flexbox

Library Management

Duration	2015 – 2017
Size	3
Position	Technical Manager
Project Description	Manage the library system on branches of a university, manage the books, and manage the online documents by using a process of overseeing, controlling, and organizing the resources (both physical and digital) in a university library across multiple branches or campuses
Responsibility	• Developed front-end features • Implemented C# API integration • Created responsive UI designs

Tools	Pure JavaScript, .NET MVC C#, SQL Server, jQuery, Flexbox
--------------	---

IoT System	
Duration	2014 - 2015
Size	1
Position	Full Stack Developer
Project Description	IoT System for Automatic Garden Pump Control and Soil Quality Monitoring The IoT system you're describing focuses on automating the irrigation process and monitoring soil quality for a garden when the owner is away. It will allow the system to adjust and manage irrigation based on real-time soil conditions and moisture levels
Responsibility	• Developed IoT website • Created dashboard and charts for sensor data • Implemented hardware connectivity features • Managed environmental monitoring systems
Tools	Angular 6, GitHub

Mobile Game QA	
Duration	2015 – 2017
Size	+10
Position	Tester
Project Description	This is A Game Tester (also known as a Quality Assurance (QA) Tester) is responsible for ensuring the game's quality, functionality, and performance before it is released to the public. Game testing involves checking for bugs, glitches, performance issues, and making sure the game meets its intended standards.
Responsibility	• Tested games on multiple mobile platforms • Identified and reported bugs • Worked with developers and designers for bug resolution
Tools	Bugbase
